

# future business Urgent Need: Web Application Performance Engineer , Saint Louis, MO for 6 months

Posted by Rama - 2010/01/08 18:27

Hi Please send your resumes to [recruiter@sai-i-systems.com](mailto:recruiter@sai-i-systems.com) Web Application Performance Engineer Saint Louis, MO for 6 months. Provides application software development services or technical support typically in a defined project. Develops program logic for new applications or analyzes and modifies logic in existing applications. Codes, tests, debugs, documents, implements and maintains software applications. Analyzes requirements, and maintains, tests and integrates application components. Ensures that system improvements are successfully implemented. Usually requires at least 15 years of previous experience. Please see attached job description for Web Application Performance Engineer. Note that this role does require a minimum of a bachelor's degree as well as 15+ years experience. Extensive experience troubleshooting and tuning enterprise Java applications for performance and scalability is a must. Web Application Performance Engineer This is a new role within Global Infrastructure's Business Alignment & Strategy team focused on Web application performance. This role will concentrate on the process and use of related IT tools to detect, diagnose, remedy and report on the performance of Web applications to ensure that defined operating targets and business expectations are met or exceeded. More simply, this role will provide a bridge between infrastructure and application development with focus on tuning applications for optimal performance and scalability in the production environment. Objectives of this role include:

- o Increase business revenue by ensuring the system can process transactions within the requisite timeframe.
- o Eliminate system failure requiring scrapping and writing off the system development effort due to performance objective failure.
- o Eliminate late system deployment due to performance issues.
- o Eliminate avoidable system rework due to performance issues.
- o Eliminate avoidable system tuning efforts.
- o Avoid additional and unnecessary hardware acquisition costs.
- o Reduce software maintenance costs due to performance problems in production.
- o Reduce software maintenance costs due to software impacted by ad hoc performance fixes.
- o Reduce additional operational overhead for handling system issues due to performance problems.
- o Ensure compliance with operating targets through systems monitoring activities that serve to validate service level compliance, detect problems and identify trends.
- o Ensure that IT capacity meets current and future business requirements in a cost-effective manner. This means executing trend analysis on historical monitoring generated data, such that the future time of non-compliance is predictable.
- o Identifying, resolving and reporting on the root cause of performance related problems.

Skill Required:

- o 15+ years Web Application Development experience. Extensive Java/J2EE development experience is required and expertise in both Java and .NET frameworks is preferred.
- o Demonstrated expertise in performance tuning enterprise-class Web applications.
- o Experience diagnosing and troubleshooting Web application performance issues.
- o Experience with load/stress testing tools (e.g. LoadRunner, WebLoad) and processes preferred.
- o Experience with enterprise monitoring suites (BMC Patrol) and capacity planning is a plus.
- o Experience with WebLogic 10.x or higher is preferred.
- o Experience with SharePoint is a plus.
- o Experience with relational database technologies (Oracle, SQL) required. Specific knowledge of database technologies: Oracle 10g / 11i, RAC, PL/SQL is preferred
- o Expertise in Internet technologies: HTML, CSS, XML, XSLT, XPATH, TCP/IP, SOAP, XML, XSD, WSDL, XSLT.
- o Experience with Unix/Linux operating systems.
- o Excellent verbal and written communication skills required to communicate and influence effectively with IT and Business partners, including ability to articulate complex technical information in a clear, concise manner
- o Ability to work in complex business domains with rapidly changing requirements
- o Excellent analytic skills - must approach problems and issues in a logical/systemic manner, research issues to the lowest level and resolve them decisively
- o Proven ability to assimilate and apply technologies through independent research
- o Proficiency in creating technical documents such as SOP's, best practices, and guidelines
- o Ability to work independently and within a team environment
- o Self motivated, able to plan work effort and manage to schedule and priorities
- o Bachelor's degree or equivalent in Computer Science, Information Systems (MCS, MIS) or in related field is required

With kind regards Best Regards, Rama S A I
