## technology changes Some changes to more search results...

Posted by Phil Haack - 2010/01/06 21:28

---

I just checked in some changes to the more search results work that Simo did. I made it so that it automatically loads for every skin. You lose control over where it gets placed, but it always gets placed at the top of the main body. By default it's highlighted bright yellow. Please try it out and let me know what you think. Also, if you run it on a local host, I made it so you can easily fake the referrer by using the URL. For example, append the following to the end of a blog post URL. `?referrer=http://google.com?q=test` That'll trigger the feature. Phil

I fixed up more search results :) but do take a look. I did run into one exception yesterday. Something about a File lock on the AppData directory. I didn't save the stack trace unfortunately. Restarting AppDomain fixed it. Phil Sent from my mobile phone On Dec 27, 2009, at 2:08 PM, Simone Chiaretta <simone.chiare...@gmail.com<mailto:simone.chiare...@gmail.com wrote: Hi all, unfortunately my wife Daniela has to work a few hrs a day while we are on holiday, so I'll bring my laptop in the mountains as well. I was mainly thinking about writing some blog posts, explaining the way Lucene.net<http://Lucene.net has been implemented into subtext and get ready a post for that explains the new feature in subtext. And I'll make sure the new features (related posts and more results) are nice looking in all the default skins. Oh good. Should we have a finalizer to be on the safe side? Sent from my mobile phone On Dec 27, 2009, at 2:18 PM, Simone Chiaretta <simone.chiare...@gmail.com<mailto:simone.chiare...@gmail.com wrote: Yeah, I know that happens quite often when you stop debugging: it doesn't trigger the Dispose method and leave the Lucene index in a locked state. But if you stop the vs webserver correctly it works. Not sure if it's something we have to worry about or not. Otherwise an unlock button might do the trick Simo On Sun, Dec 27, 2009 at 11:11 PM, Phil Haack <<mailto:phi...@microsoft.comphi...@microsoft.com<mailto:phi...@microsoft.com wrote: I fixed up more search results :) but do take a look. or the excerpt... The naive approach is taking the first 100 words. A better but more complicate one will be taking also into account ends of paragraphs and similar things. Do we already have something that builds it? The cats, not sure if it adds a lot of value, but adding them at indexing time is not a big deal
